Introductory Notes

The method of constructing the index for agricultural production in Latin America is generally the same as that used in earlier studies ^{1/} and for 1960/61 by ERS. Since corn is the crop most universally produced and consumed, that product was chosen as the common denominator in determining the weights used. Prices per unit of all products within a given country in the prewar period were expressed as relatives of countries to obtain an area weight for each commodity. The same commodity area weights were used for all 20 countries in the construction of the index of production. The aggregates are the product of these weights and production for years shown. The index itself is now related to a base period of 1952/53-1954/55. The cut-off date for revisions in the current report is November 15, 1962.

In general, the harvesting season for major crops in the Latin American countries begins in the last months of one calendar year and continues into the first months of the next year. In northern South America and Central America harvesting begins earlier (June or July) in the first year and continues until near the middle of the next year. Data on livestock products are reported on a calendar year basis. For this index such calendar year data for the first year of the crop year shown in the table headings are included to indicate annual production.

Meat figures cover estimated total slaughter and include meat from imported animals. Data are on a carcass weight basis and "mutton" includes lamb and goat meat. Export data are taken as production for bananas, since it is difficult to obtain complete production data.

Coffee is not included in the total food production aggregates, the food production index or the per capita food production index, and the computations for these categories are comparable to the food less coffee section of the 1961 indices.

1/ "Agricultural Production Indices for the ERP Countries," Foreign Agriculture, January 1951; "Postwar Progress in Asia's Agricultural Production," Foreign Agriculture, January 1952; "Indices of Agricultural Production for 20 Latin American Countries, Preliminary 1959/60," October 1960.
